# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

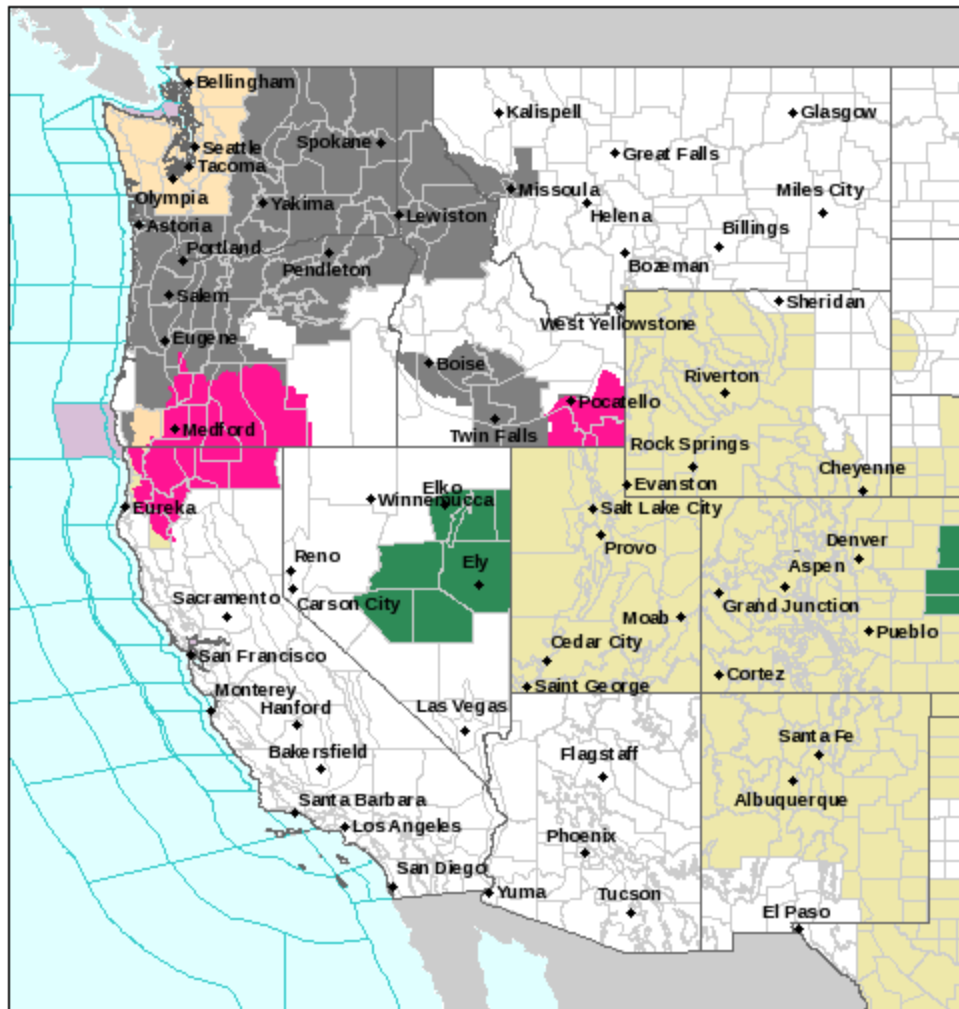

\*\*\* Thunderstorms with Moderate Rainfall Over the Higher Terrain Daily through Wednesday \*\*\*

Low pressure near the northern CA coast will continue to pull moist unstable monsoon moisture northward into the region into the middle of next week. Temperatures will be near normal with fairly high humidity. Showers and thunderstorms will mainly occur near the higher terrain, from Lake County north in western areas, from northern Shasta County north in the central areas, and all areas in the east, especially from the Cascade-Sierra crest east. A direct hit from a thunderstorm could yield 0.50 inches of rainfall, but dry strikes and new ignitions are always possible. Outflow winds from any storms could reach 40-50 mph and would affect fire behavior and suppression activities on any nearby fires. This pattern will continue the active Initial Attack situation and elevation the potential for significant fires, but due to the higher RH and potential rainfall this event remains below High Risk criteria.

## **SOUTHERN CALIFORNIA**

There will be little change in the weather through next weekend. Low pressure off the California Coast will bring isolated afternoon showers and thunderstorms over these areas Monday through next weekend. Temperatures will be near normal, with upper 70s and 80s across the mountains and upper 80s and 90s in the valleys. Minimum humidity will be above 20% today and then between 15% and 30% Monday through next weekend. Westerly winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes each afternoon.
